

CATALAN EXHIBITORS MWC 2025

03 - 06 March 2025

Generalitat de Catalunya
Government of Catalonia

NEW SPACE

Welcome to Catalonia, the digital heart of Europe

Welcome to **Catalonia, the digital heart of Europe**. Once again we're at the gates of the Mobile World Congress (MWC), one of the largest socio-economic gatherings in the world.

This is an event that goes far beyond an international congress to exhibit advances and trends in the technology sector to become a venue for debate and decision-making with regard to the future and use of new technologies.

Technological companies, disruptive startups, investors and governments from around the world must be able to enter into dialog and agree on actions to ensure that the future of the digital society benefits everyone, overcomes major global challenges and bases itself on human values. A field to which Catalonia can contribute a great deal.

Since the first time it was held in 2006, the Mobile World Congress has formed a winning team with Catalonia. Thanks to the involvement and encouragement of the Government of Catalonia and other public and private players, companies and citizens who have advocated the MWC as a source of opportunities and prosperity. But we've also managed to turn the MWC into a key driving force when it comes to positioning Catalonia as Europe's digital hub and a global technological reference, not only during the four days of the congress but throughout the year.

Catalonia, the digital heart of Europe, the motto with which the Government is set to take part in this year's MWC, seeks to highlight Catalonia as a European benchmark and a key actor in the continent's technological sovereignty. We'd also like to serve as a template for technological and digital innovation that drives progress and economic growth, creates highly-qualified employment and transforms society.

At the Catalonia stand, located in Congress Square (CS210-CS220), you'll be able to enjoy an immersive experience enabling you to learn more about the four axes this positioning is based on and the Government's actions and strategies to drive them: Digital Economy, Digital Government, Digital Talent and Connectivity.

Once again we invite you to discover the power and creativity of the Catalan digital ecosystem. It's an ecosystem that's made up of companies and technological centers that strive to innovate, grow and become more international and, with the Government's support, at the Catalonia stand they'll find the ideal place to showcase their products and services to the world, make new international contacts and negotiate international cooperation agreements.

In the catalog you're holding in your hands you can read the descriptions of the 46 companies and technological centers that you'll find at the MWC 25 Catalonia stand and their locations within the hall, as well as those of two governmental initiatives within the framework of the strategy to promote advanced technologies as the engine of the digital economy. So welcome to the Catalonia stand, where the digital heart of Europe beats.

The Right Honourable Mr. Salvador Illa i Roca
President of the Government of Catalonia

Generalitat de Catalunya Government of Catalonia

cactusiot.com

**Contact**

Israel Blanco

CEO

☎ + 34 667 735 767

✉ iblanco@cactusiot.com

Products/Services/Solutions

Our business model has 2 distinct lines that often end up being related:

1. We offer our IoT platform (Cactus Link) as a service (SaaS) depending on the volume of data and IoT devices to be controlled.
2. Consulting service for "turnkey" projects, which range from HW, FW and Cloud to App/Web developments.

Cactus is a multidisciplinary engineering consulting firm with extensive experience in hardware and software development, specializing in end-to-end electronic solutions for the IoT market along any of its verticals: Healthcare, Energy, Agriculture, Fintech, Industry 4.0, Retail, Home Automation, Transport and Logistics. We have been developing efficient technology around our clients' needs for more than 15 years, using an agile working methodology of continuous deliveries. Broad experience with connectivity (WLAN, BLE, LoRa, 5G, etc.), energy management (ultra low power), artificial intelligence (edge machine learning), sensors (temperature, pressure, humidity, AGM, gas, CMOS, etc.), developing secure and distributed cloud architectures, as well as web and app development. Efficiency is our passion. Whether it is developing hardware, cloud infrastructures or apps, we always design the solution that requires the fewest resources, saving energy and money for our clients and making our contribution to a more sustainable world.
